

What The Experts Are Saying About *I Know You're In There*

Dr. Martha Herbert, MD, PhD, Harvard Medical School neurologist, researcher, clinician and author of *The Autism Revolution* says:

"I Know You're In There shows that autism is not a hardwired impairment stamped into the brain by the child's genes and destined to remain fixed forever, as we're often told. Instead, it is the TOTAL LOAD of challenges to a child's whole system that overloads the brain and causes the behaviors associated with autism. Even a few treatments that reduce the load and increase supports can make a huge difference. Ryan's recovery is a testimony to this approach."

Dr. Victoria L. Falcone, DO, Falcone Center for Functional and Integrative Medicine says:

"I Know You're In There should be given to every family when they receive an autism diagnosis. This book will help parents understand the importance of digging deep to identify possible underlying immune dysfunction rather than just accepting therapy alone as the only option for improving development. More importantly Ryan's story should serve as a source of encouragement to families struggling to manage daily life as they navigate the challenges of this complex disease process. The title is perfect. If you know your child is In There, use this book to inspire you in the hardest of times to never, ever give up hope that you can find a path to recovery."

Dr. Rosario Trifiletti, MD, PhD, Pediatric Neurologist, PANDAS/PANS expert says:

*"This book will give you HOPE! I couldn't put it down. Ryan's story of diagnosis and recovery illustrates that there is a medical basis for most, if not all, cases of autism. Today, powerful technologies are available which can help doctors make a more accurate and timely diagnosis of this medical basis. If there is one message in this book it is **never give up trying!**"*

Dr. Melinda Borrello Sharma, PhD Director of Autism Spectrum GPS, LLC says:

"This book is a MUST read for any family struggling with autism. As an immunologist, my intuition said my son's dysfunctional immune system was at the core of his illness. Marcia's experience correcting Ryan's immune system and recovering the whole child is shared openly and honestly in this book. The Hinds family could have taken the easy path, walked away from Autism and moved on with their life. Instead of letting others figure it out for themselves, Ryan's story will inspire and inform crucial medical and educational decisions. This unique book offers the hope and tenacity parents need to find the answers for their children in the midst of a journey that is turbulent and not linear. Hope is contagious. Now that we know what is possible, we must never give up on recovery."

Dr. Sidney McDonald Baker, MD, Founder of Autism360.org says:

*"After reading Ryan's story, parents will realize there is hope and recovery is possible. This book shows the medical treatment is different and individual for every child. **I Know You're In There** helps the reader understand that medicine alone is not enough. We must use a child's interests and strengths to help them overcome autism."*

Dr. Stephen Edelson, Director of the Autism Research Institute (ARI) says:

"Marcia Hinds provides a detailed case history of how her child responded positively to various treatment interventions, many of which are not yet considered evidenced-based by the scientific community. I truly hope this book will inspire researchers worldwide to study these interventions. Once validated, these treatments will likely become accepted by the autism and medical communities and covered by health insurance companies."

Mindi Fischer Polenz, BCBA, MSc SLT, Director of Behavior Intervention Group (BIG) says:

"When I first met Ryan around age five, he was disengaged and had significant social and communication problems. While Ryan's deficits were extensive, he made remarkable progress after we implemented the Applied Behavior Analysis (ABA) program designed to specifically meet his needs. I feel fortunate and proud to have been a part of his amazing success and continue to be inspired by him and his family's relentless dedication that lead to his recovery."
